

- Title:** short, catchy, and related to the topic and results of the experiment
- Question** the question to be tested
- *Prediction:** the predicted answer to the question/problem asked with a reason
- Materials:** a list of the supplies, equipment to be used
- Procedure:** a list of the steps followed to perform the experiment
- Results:** data displayed in table and graph form to include data analysis (mean, medium, mode, range) and accompanied by a written explanation
- Conclusion:** briefly answers the question asked in the beginning; states the prediction to be supported or not supported, and makes suggestions for further research
- * Hypothesis**

Need this.
 You can use
 some paper
 stapled or a folder.

A "Sample" Display Backboard

*This image is from Science Fair Central. Instead of using "Experiment" please use "Procedure". You also can identify materials used. Look on my website for another example. www.ccboe.com/teachers/temhoff
